About the event:

The T&P committee of EC Department of SCET organised the **'Training and Placement Orientation Program and clearing campus placement'** on 11th July 2024. Total 48 students from BE IV, sem 7 EC participated in the Orientation program. The main goal was to orient the aspirants about the vision of the T&P cell, create awareness about campus placement, registration for campus interviews of the companies and job survey to know the number of students interested for job.

- **Vision of the T&P committee of Department and Campus placements:**

Department T&P coordinator, Prof Sarosh Dastoor addressed the program providing the vision of the T&P cell and motivated the participants for cracking the campus placements for various companies with their requisites. Prof Sarosh added that the Training and Placement Cell envisions becoming a dynamic and industry-focused hub that empowers engineering students to excel and be sought after by leading organizations nationwide / worldwide. We aspire to establish a seamless bridge between academia and industry, facilitating career growth and fostering innovation for the holistic development of the students. He also addressed the aspirants regarding the requirements of companies and the standard operating procedure for the Campus placements and showed concern about the less registrations for the campus placements. TCS campus clearance with three profiles viz. TCS Ninja, TCS Digital and TCS Prime; and the requisites associated with it were demonstrated in details along with the average placement statistics for the last three years.

Prof. Ketki Pathak provided valuable information related to post-graduation in India as well as abroad. She made students aware about the competitive exams like GATE, IELTS, GRE etc. applicable for various university admissions. She added that preparation should initiate from third year onwards and with proper vision one may acquire admission in the fall intake in September, just after the declaration of the university results. Information about Fee Waiver schemes and scholarships associated with various universities was also provided.

HOD, Prof Chirag Paunwala motivated the students to enhance their skills, participate in the various workshops, competitions and hence, make them suitable for the campus selection. He also stressed about the requirements of engineers from core branches for IT sector companies and the demand of the industries. Prof Pranav Lapsiwala highlighted the students regarding the market demand and efficient role to be played as a student for him/her to be recruited in the

company. Prof. Maulin Joshji also motivated the students to clear their vision regarding job requirements, further studies or entrepreneurship. It is always a vision that leads to destination.

T&P Departmental student coordinator viz. Sarthak Bosamia and Dev Joshi were requested to shoulder the responsibility for obtaining the job count of the colleagues in the given pattern. Job survey is conducted every year for the final year students to obtain the count about the students interested for job, post-graduation and entrepreneurship. Many students interacted with the faculties regarding the eligibility of core branch-based companies as well as IT Sector based companies. They were informed that for majority of IT based companies, CGPA does not matter, only specific skills and zeal to perform the accomplishments will pave the path for high placements.

Outcome of the program:

The Training and Placement Orientation Talk was a resounding success and the outcome could be summarized as: -

- It provided students with a comprehensive understanding of the placement process, industry expectations, and the skills required to secure promising job opportunities.
- The insights shared by T&P departmental coordinator, HOD and other faculty members were particularly valuable in bridging the gap between academic knowledge and industry requirements.
- The event received overwhelmingly positive feedback from both students and faculty members, indicating its immense value in enhancing the employability of students.
- It is anticipated that the knowledge and skills gained from this orientation program will significantly contribute to the success of the upcoming placement season.

The glimpse of the event in the form of snaps is shown below:
